AB - JP2001002800 NOVELTY - The gas barrier property polyester film consists of 60-90 weight% (wt.%) of polyethylene terephthalate (PET) and 40-10 wt.% of metaxylylene adipamide (MXD6). The relative viscosity ( eta ra) of PET and relative viscosity ( eta rb) of MXD6, satisfies the relation, 11.0 at most eta ra multiply 10- eta rb at most 12.0.

- DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for manufacture of gas barrier property polyester film which involves performing biaxial orientation of unstretched film of PET and MXD6, in vertical and horizontal direction.

- USE - For packaging foodstuffs.

- ADVANTAGE - The polyester film excels in gas barrier property and transparency. The polyester film has excellent exterior surface.
